

# KBB residential door- Open your convenient and modern life

Are you still experience the traditional life that open & close the residential doors with your hands day after day? Are you still often meet the situation that couldn't open the door easily with your hands full? Or are you still often forget to close the kitchen door which make the whole house filled with the acrid lampblack? The newly automatic residential door GI3000 which developed by KBB will resolve the problems above immediately.

Alternative moving leaves

Wireless switch- open door with no touch

Operator and door frame connector

2 patents made KBB GI3000 in the leading level in residential door field around the world.

KBB residential door will open your convenient and modern life !

GI3000 based on KBB over 20 years' automatic door manufacturing experience, the most advanced technology from Europe, America and Japan, as well as the deep analysis for modern family environment. What's more, it used the most advanced human intelligence control technology which make GI3000 had lots of advantages.

Advantages	Discription
Automatic	Housewives who usually have their hands full can walk through rooms at ease. Disabled and elderly won't take doors as daily challenge.
Pets sensors	Pet owners enjoy their sleep while their pets come in and go out.
Hermetic	Smoke between kitchen and living room is isolated. Air conditioning cost is saved because no more left open doors.
Hygienic	Hands are freed and more hygienic because no more push to open.
Safe	All the sensors from Europe. Force sensitive door leaf. Anti-squeeze and Anti-collision. 36V Safety Voltage.

	Discription
Alternative moving leaves	Both of the two leaves can open automatically as moving leaf like manual sliding door leaves sliding in opposite directions.
Operator and door frame connector	Operator can be connected with door frame made of solid wood, composite wood, aluminum, stainless steel, glass and etc.

**KBB believes: there is nothing best but better!**
